HP WOLF ENTERPRISE SECURITY: ALWAYS ON GUARD

HP Enterprise printers are the only printers with integrated security features that heal themselves after attacks using automatic restart.

1. SECURE BIOS

If a compromised version of the BIOS is detected during startup, HP Sure Start restarts the printer with a secure “golden copy” of the BIOS.

2. WHITELISTING

Our authentication lists are certified by HP and ensure, that the firmware is digitally signed by HP. At any sign of tampering, the printer will reboot to a secure state.

3. MONITORED MEMORY

Run-time Intrusion Detection is active at the most vulnerable times. That is, when the printer is turned on and connected to the network. Unusual activity leads to a reboot that clears the printer’s memory and thus the threat.

4. MEMORY SHIELD

Memory Shield™ extends the Run-time Intrusion Detection feature to monitor print, scan, fax and network data. Memory Shield protects against unknown/new attacks also known as zero-day attacks and protects more broadly. Unusual activity leads to a reboot that clears the printer’s memory and thus the threat. Only applicable on selected newer devices.

5. MONITORED NETWORK TRAFFIC

HP Connection Inspector checks the printer’s outgoing data for packets typically used by hackers. Suspicious data requests trigger a restart and the printer boots up in a secure mode.

6. HP SECURITY MANAGER

One of HP’s most comprehensive print security solutions, HP Security Manager provides a true overview of the security of your print fleet.
